PROFESSIONAL SUMMARY

Machine Learning Engineer with a strong research foundation and hands-on experience delivering end-to-end ML systems. Focused on reproducible workflows, automated evaluation, and efficient production deployment and model serving.

TECHNICAL SKILLS

ML & CV: PyTorch/Lightning, TensorFlow, JAX, Detectron2, MMEEngine/MMCV/MMDetection, Albumentations, Scikit-learn, XGBoost, OpenCV, ITK, pyclesperanto, NumPy, Pandas, CVAT, Transformers/TIMM/Huggingface
Experimentation & Tracking: MLflow, DVC, Optuna, Jupyter Notebook/JupyterLab, Tensorboard, Matplotlib/seaborn/Plotly
Infrastructure & Deployment: AWS, Docker, Kubernetes, Prefect, CI/CD (GitLab, Bitbucket), Linux, Triton/TensorRT
Backend & Dev Tools: Flask, REST, FastAPI, OpenAPI, FHIR, Git, SQL, MQTT, Claude, Codex, OpenClaw
Languages: Python (Professional), C++17, TypeScript (Proficient), Java, MATLAB (Basic)

EXPERIENCE

Machine Learning & Computer Vision Engineer

June 2023 – July 2026

RAYLYTIC GmbH

Full-time

- Built and productionized an end-to-end 2D–3D registration pipeline for implant pose estimation from X-rays with **GPU-accelerated Docker** and **Prefect workflow orchestration**; improved acceptance rate by 45% and reduced error by 15%
- Migrated segmentation model serving to a centralized **Triton Inference Server**–based **REST API**, cutting inference latency by 50%
- Implemented an **MLOps** pipeline with **DVC** data versioning, **MLflow** experiment tracking, and **automated evaluation**
- Delivered production-grade segmentation, detection, and classification models for X-ray imaging; improved accuracy (mAP, Dice, ROC) by 20–50% over baseline and reduced training time 8-fold
- Deployed an X-ray classification model on **Amazon SageMaker AI**
- Developed 3D instance segmentation and registration for light-sheet microscopy images in a liver cancer research project.

Freelance Computer Vision Engineer

Feb 2026 – Mar 2026

Smoothr.de / Sterlix GmbH

Contract

- Developed depth-map–based camera obstruction detection for real-time retail anti-theft systems

Research Engineer

January 2022 – March 2023

Data Science Research Group

Part-time

- Developed bio-signal classification on an HPC cluster for surgical pain assessment in non-responsive patients
- Designed data pipelines and training workflows for a ticket-routing classifier, transforming unstructured text into structured features and streamlining dataset updates and model evaluation for industry partners.

Internships

- ML Thesis Student at RAYLYTIC GmbH – (Oct 2022 – Feb 2023): Developed anatomical landmark localization model
- ML Intern at Prudsys GmbH – (Dec 2021 – Feb 2022): Automated analytic workflows and data preprocessing pipelines
- Autonomous Driving Intern at IAV GmbH – (Sep 2021 – Nov 2021): Investigated inverse reinforcement learning for self-driving
- Student Research Assistant at WHZ – (Jan 2020 – Dec 2021): Developed a semantic segmentation model for automated tissue-density analysis of 3D lung CT scans; developed an autoML library and predicted patient admission to the ICU during COVID.

EDUCATION

B.Sc. Data Science with distinction (1.1 / 1.0)

University of Applied Sciences Zwickau

Oct 2019 – Apr 2023

Zwickau, Germany

M.Sc. Civil Engineering (wGPA: 90.12/100)

Odesa State Academy of Civil Engineering and Architecture

Sep 2014 – Jun 2020

Odesa, Ukraine

PUBLICATIONS & AWARDS

EFORT 2026: Validation of a 2D-3D Image Registration Method for TKA Implant Pose Estimation. Pysanyi et al.

DWG 2023: Automatic determination of lumbar segmental lordosis based on an AI algorithm. Pysanyi et al.

1st Place: National Strength of Materials Olympiad (Ukraine, 2018)

LANGUAGES

German (C1, TestDaF), English (C2, EF SET Certificate)
